

# Lecture 06

pipe 1: { write-end1  
read-end1

pipe 2: { write-end2  
read-end2

Which modules have been implemented?  
2, 4/6, 5/7, 8

Which modules should be implemented?  
1 and 3

How can module 1 (i.e. load file) check errors?

```

char unsigned int
int Word_count( text[ ], *counter);
int load-file ( file-name, text[ ] );
  
```

Don't present the command-line parser. Ask "What's missing?" Then present it.
